

Micofin Tablets  
Reg. Key SAGARPA Q-0524-106\*  
FOR VETERINARY USE  
Terbinafine  
Oral Antimycotic tablets

## DRUG DESCRIPTION

Every 100 mL contain  
Terbinafine Clorhydrate Equivalent to 100 mg of Terbinafine base  
Excipiente c.b.p. 1 tablet

Micofin Tablets is an oral broad-spectrum antimycotic. Its active component, terbinafine chemically belongs to the allylamines

Micofin Tablets is recommended for treating skin mycotic infections (ringworm) and claws caused by dermatophytes (*Microsporum* spp., *Trichophyton* spp and *Epidermophyton floccosum*) as well as infections caused by yeast such as *Candida* (*Candida albicans*) where topical therapy is limited, it works for dogs and cats.

Micofin Tablets has a fungicidal effect even in low concentrations.

Micofin Tablets achieves high concentrations on the affected spots even though they might be difficult to reach like skin, claws and hair due to its keratin.

Micofin Tablets due to its effectiveness it's a first choice systemic treatment for superficial mycosis on extensive body areas or on spots where it's difficult to reach because of their proximity to mucous membranes and organs such as eyes and therefore topical treatment cannot be used.

Micofin Tablets it is more effective than Imidazoles and griseofulvina which implies less number of relapses and treatment period reductions.

Micofin Tablets doesn't cause any injuries to the bone Merrill.

Micofin Tablets Keeps under control itchiness and nibbling on the affected areas, stops hair loss due to fungus, it also improves pets' physical shape and aspect.

Micofin Tablets It can be used along antibiotics (Enrocilina® Tablets) and acaricides (Endovet® cream) when treating dermatitis.
